

Qualification Review – Electrical Equipment in Hazardous Areas

April 2009

As the National Standards Setting Body for Electrical Equipment in Hazardous Areas ETITO is required to review the existing standards to ensure they remain current and fit-for-purpose.

ETITO works in partnership with industry to carry out such review processes.

We have now formed a core consultation group for the review of standards surrounding Electrical Equipment in Hazardous Areas. In order to receive a greater depth of contribution from industry, we would now like to extend the invitation to people interested in being part of a wider consultation group surrounding this review.

Participation would involve joining an email consultation group and being sent meeting notes, with the opportunity to comment on draft material and offer your input. By participating you will take an active part in ensuring the continuing relevance of training packages for this sector.

Anticipated development process:

- Group members can participate by productively commenting on meeting notes and draft material

If you would like to register your interest to be considered for the wider Consultation Group, please contact:

Tracey Cooke, Qualifications Advisor [Project Leader]
